English : intermediate

EDUCATION

Bachelor degree in chemical engineering

2018-2022

PROFILE

A passionate graduate of Generation's junior software developer bootcamp seeking an entry-level full stack developer. Enthusiastic to apply my knowledge and skills to perform productive tasks.

EXPERIENCE

Junior Software Developer Bootcamp

2023-2024

- Learned how to be a Web developer by studying fundamental web programming, using frameworks that make it easier to build web applications and working with SQL databases and NOSQL database
- Practiced soft skills like communication, time management and collaboration with teammate, group project or random learner
- Built a CRUD web application by using MERN stack.
- Final project : I.MOVE exercise tracking web application [Link](#)
 - The project consisted of main feature to allow user to create, edit and delete activity card and addition feature about register, sign-in, setting and dashboard. Working process has been divided into 3 sprints.
 - The first sprint is to design a web wireframe, specify element in each page and carry out a template static website.
 - The second sprint is to implement the front-end framework to refactor code into components and pages.
 - The last sprint is to utilize back-end framework to handle user request, server response and manage database

Internship

2021

- Participated in the process safety department at SCG Chemical Company by working from home
- My responsibilities were to learn about unit operation, process hazard analysis and chemical incident case study. In addition, I attended HAZOP (Hazard and Operability study) activities.
- My project is to create a document summarizing relations about chemical equipment, incident, root cause and impact.
